Song of Iliad

Tiina KYMÄLÄINEN
Aalto University

Abstract. The short story “Song of Iliad” describes a future music therapy “performance space” in which children around the globe create music together, form a band and perform for others. The story encapsulates the human-driven design approach and presents an example of how future design processes might exploit emotion-driven design in creating highly personified products and services.

Keywords. Smart Spaces, Do-it-yourself experiences, User-Centred Design (UCD), Human-Technology Interaction (HTI), Design for All (DfA), Music Therapy.

Figure 1. Song of Iliad.
