

# **Agent Technology for e-Commerce**

**Maria Fasli**

**John Wiley & Sons, © 2007**

## **Contents**

### **1 Introduction**

- 1.1 A paradigm shift
  - 1.1.1 A brief history
  - 1.1.2 The novelty in agents
  - 1.1.3 Agent applications
- 1.2 Electronic commerce
  - 1.2.1 E-commerce and organisations
  - 1.2.2 E-commerce and the individual
- 1.3 Agents and e-commerce
- 1.4 Further reading
- 1.5 Exercises and topics for discussion

### **2 Software agents**

- 2.1 Characteristics of agents
- 2.2 Agents as intentional systems
- 2.3 Making decisions
  - 2.3.1 Environments
  - 2.3.2 Performance measure and rationality
  - 2.3.3 Rational decision making and optimal policies
  - 2.3.4 Optimal policies in MDPs
- 2.4 Planning
- 2.5 Learning
- 2.6 Agent architectures
  - 2.6.1 Logic-based architecture
  - 2.6.2 Reactive architecture
  - 2.6.3 Belief-Desire-Intention architecture
  - 2.6.4 Hybrid architecture
- 2.7 Agents in perspective
  - 2.7.1 Agents and objects
  - 2.7.2 Agents and expert systems
  - 2.7.3 Agents, Web Services and the Semantic Web
- 2.8 Methodologies and languages
  - 2.8.1 Methodologies
  - 2.8.2 Agent-oriented methodologies
  - 2.8.3 Object-oriented based methodologies
  - 2.8.4 Knowledge-engineering based methodologies
  - 2.8.5 Programming languages and environments
  - 2.8.6 From legacy systems to agents

- 2.9 Further reading
- 2.10 Exercises and topics for discussion

### **3 Multi-agent systems**

- 3.1 Characteristics of multi-agent systems
  - 3.1.1 Potential and challenges
  - 3.1.2 Closed MAS
  - 3.1.3 Open MAS
- 3.2 Interaction
  - 3.2.1 Elements of interactions
  - 3.2.2 Modes of interaction
  - 3.2.3 Interaction protocols
- 3.3 Agent communication
  - 3.3.1 Speech Act theory
  - 3.3.2 Agent communication languages
  - 3.3.3 Knowledge and Query Manipulation Language (KQML)
  - 3.3.4 FIPA ACL
  - 3.3.5 Comparing KQML and FIPA ACL
  - 3.3.6 Knowledge Interchange Format Language (KIF)
  - 3.3.7 Dialogues
  - 3.3.8 A layered model of communication
- 3.4 Ontologies
  - 3.4.1 Explicit ontologies
  - 3.4.2 Developing ontologies
  - 3.4.3 OWL
- 3.5 Cooperative problem solving
  - 3.5.1 Task decomposition and distribution
  - 3.5.2 The ContractNet Protocol
- 3.6 Virtual organisations as MAS
- 3.7 Infrastructure requirements for open MAS
- 3.8 Further reading
- 3.9 Exercises and topics for discussion

### **4 Shopping Agents**

- 4.1 Consumer buying behaviour model
- 4.2 Comparison shopping
- 4.3 Working for the user
- 4.4 How shopping agents work
- 4.5 Limitations and issues
- 4.6 Further reading
- 4.7 Exercises and topics for discussion

### **5 Middle agents**

- 5.1 Matching
  - 5.1.1 Middle agent architecture
  - 5.1.2 Interacting through a middle agent

- 5.2 Classification of middle agents
  - 5.2.1 Matchmaker
  - 5.2.2 Broker
  - 5.2.3 Broadcaster
  - 5.2.4 FIPA Directory Facilitator
- 5.3 Describing capabilities
- 5.4 LARKS
  - 5.4.1 Matching in LARKS
  - 5.4.2 Matching methods
- 5.5 OWL-S
- 5.6 Further reading
- 5.7 Exercises and topics for discussion

## **6 Recommender systems**

- 6.1 Information needed
- 6.2 Providing recommendations
- 6.3 Recommendation technologies
- 6.4 Content-based filtering
- 6.5 Collaborative filtering
  - 6.5.1 How collaborative filtering systems work
  - 6.5.2 Neighbourhood-based algorithms
  - 6.5.3 Problems in collaborative filtering
  - 6.5.4 Collaborative filtering systems
- 6.6 Combining content and collaborative filtering
- 6.7 Recommender systems in e-commerce
- 6.8 A note on personalisation
- 6.9 Further reading
- 6.10 Exercises and topics for discussion

## **7 Elements of strategic interaction**

- 7.1 Elements of Economics
  - 7.1.1 A simple market economy
  - 7.1.2 Consumption bundles and preferences
  - 7.1.3 Utilities
  - 7.1.4 Equilibrium
- 7.2 Elements of Game Theory
  - 7.2.1 Strategic games
  - 7.2.2 Extensive form representation
  - 7.2.3 Information
  - 7.2.4 Categories of games
  - 7.2.5 Solution concepts
  - 7.2.6 Mixed strategies
  - 7.2.7 The prisoner's dilemma
  - 7.2.8 Repeated games
  - 7.2.9 Dynamic games
  - 7.2.10 Bayesian-Nash games

- 7.2.11 Beliefs and sequential rationality
- 7.3 Further reading
- 7.4 Exercises and topics for discussion

## **8 Negotiation I**

- 8.1 Negotiation protocols
- 8.2 Desired properties of negotiation protocols
- 8.3 Abstract architecture for negotiating agents
- 8.4 Auctions
- 8.5 Classification of auctions
- 8.6 Basic auction formats
  - 8.6.1 English auction
  - 8.6.2 Dutch auction
  - 8.6.3 First-price sealed-bid auction
  - 8.6.4 Vickrey auction
  - 8.6.5 Allocation and revenue comparisons
  - 8.6.6 Disadvantages of auctions
- 8.7 Double auctions
  - 8.7.1 Mth and (M+1)st price rules
  - 8.7.2 Implementation of the Mth and (M+1)st price rules
- 8.8 Multi-attribute auctions
- 8.9 Combinatorial auctions
- 8.10 Auction platforms
  - 8.10.1 AuctionBot
  - 8.10.2 e-Game
  - 8.10.3 Trading Agent Competition
  - 8.10.4 Online auctions
- 8.11 Issues in practical auction design
- 8.12 Further reading
- 8.13 Exercises and topics for discussion

## **9 Negotiation II**

- 9.1 Bargaining
  - 9.1.1 Bargaining power
  - 9.1.2 Axiomatic bargaining
  - 9.1.3 Strategic bargaining
  - 9.1.4 The strategic negotiation protocol
- 9.2 Negotiation in different domains
  - 9.2.1 Task-oriented domains
  - 9.2.2 Worth-oriented domains
- 9.3 Coalitions
  - 9.3.1 Coalition Formation
  - 9.3.2 Coalition structure generation
  - 9.3.3 Division of payoffs
- 9.4 Applications of coalition formation
  - 9.4.1 Customer coalitions

- 9.4.2 Coalition Protocols
- 9.4.3 Post-negotiation protocol
- 9.4.4 Pre-negotiation protocol
- 9.4.5 Distribution of costs and utility
- 9.4.6 Other applications
- 9.5 Social choice problems
  - 9.5.1 Making a social choice
  - 9.5.2 Voting protocols
  - 9.5.3 Maximising social welfare
- 9.6 Argumentation
  - 9.6.1 Generating arguments
  - 9.6.2 The PERSUADER system
  - 9.6.3 Logic-based argumentation
  - 9.6.4 Negotiation as dialogue games
- 9.7 Further reading
- 9.8 Exercises and topics for discussion

## **10 Mechanism design**

- 10.1 The mechanism design problem
- 10.2 Dominant strategy implementation
- 10.3 The Gibbard-Satterthwaite Impossibility Theorem
- 10.4 The Groves-Clarke mechanisms
  - 10.4.1 Quasilinear environments
  - 10.4.2 The Groves mechanism
  - 10.4.3 The Clarke mechanism
  - 10.4.4 The Generalised Vickrey Auction
  - 10.4.5 Inducing truth telling in voting mechanisms
- 10.5 Mechanism design and computational issues
- 10.6 Further reading
- 10.7 Exercises and topics for discussion

## **11 Mobile agents**

- 11.1 Introducing mobility
- 11.2 Facilitating mobility
  - 11.2.1 Migration
  - 11.2.2 Modes of migration
- 11.3 Mobile agent systems
  - 11.3.1 Non-Java mobile agent systems
  - 11.3.2 Java-based mobile agent systems
- 11.4 Aglets
  - 11.4.1 Programming model
  - 11.4.2 Communication
  - 11.4.3 Security
- 11.5 Mobile agent security
  - 11.5.1 Threats
  - 11.5.2 Security services

- 11.5.3 Protecting the host
- 11.5.4 Protecting the mobile agent
- 11.5.5 Dealing with the perpetrators
- 11.6 Issues on mobile agents
- 11.7 Further reading
- 11.8 Exercises and topics for discussion

## **12 Trust, security and legal issues**

- 12.1 Perceived risks
- 12.2 Trust
- 12.3 Trust in e-commerce
  - 12.3.1 Trust in agent technology
  - 12.3.2 Trust in the marketplace
- 12.4 Electronic institutions
  - 12.4.1 Norms, institutions and organisations
  - 12.4.2 From norms to institutions
  - 12.4.3 Formalising norms
  - 12.4.4 Agents in electronic institutions
- 12.5 Reputation systems
  - 12.5.1 Reputation systems in practice
  - 12.5.2 Issues and problems
- 12.6 Security
- 12.7 Cryptography
  - 12.7.1 Symmetric cryptosystems
  - 12.7.2 Asymmetric cryptosystems
  - 12.7.3 Applications of public key cryptography
  - 12.7.4 Digital signatures
  - 12.7.5 Digital certificates
- 12.8 Privacy, anonymity and agents
  - 12.8.1 Agents and privacy
  - 12.8.2 Anonymity
  - 12.8.3 Protecting privacy
- 12.9 Agents and the law
- 12.10 Agents as legal persons
- 12.11 Closing remarks
- 12.12 Further reading
- 12.13 Exercises and topics for discussion

## **A Introduction to decision theory**

- A.1 Probability theory
  - A.1.1 Prior probability
  - A.1.2 Conditional probability
  - A.1.3 Independence
  - A.1.4 Bayes' rule
- A.2 Making decisions
  - A.2.1 Non-probabilistic decision making under uncertainty

A.2.2 Probabilistic decision making under uncertainty

A.3 Utilities

A.3.1 Preferences

A.3.2 Utility functions

A.3.3 Utility and money

A.3.4 Multi-attribute utility functions

A.4 Further reading
